Introduction

Work documents is a 'learning unit' from the Flooring Technology training resource. It supports the following competency from the *Certificate III in Flooring Technology* (LMF31208):

- *LMFGN3001B: Read and interpret work documents*

To be assessed as competent, your assessor will use a range of methods to check your understanding of the concepts presented in the Learner guide for this unit and your ability to apply these principles at work.

These may include:

- written assignments
- practical demonstrations
- on-the-job discussions about how you go about particular activities
- learning activities undertaken while you're progressing through the unit
- log book or work diary.

Literacy, numeracy and computer skills

Literacy is the ability to read and write. To complete this qualification, you will need sufficient literacy skills to produce a range of workplace documents. You will also need the skills to be able to read and understand documents such as order forms, installation instructions, project briefs and safe operating procedures.

Numeracy is the ability to work with numbers. Flooring installers need to do lots of measure-ups and calculations, so there will be many opportunities for you to learn and practise your numeracy skills.

When it comes to completing the written assignments for this qualification, a certain level of literacy ability is required to read the questions and write down your answers. There will also be times when you are asked to generate documents on a computer.

Obviously, it's important that you clearly understand what the assignment is asking you to do, and that your work is a good reflection of what you really know. So if you're having trouble reading the questions, writing down your answers, or using certain computer programs, make sure you speak to your trainer before you hand the assignment in.

There are various ways your trainer can help you. For example, they may be able to ask the assignment questions verbally and help you to write down your answers. They may also be able to show you sample answers to similar questions, which will

let you look at the way they're written and give you hints on how to write your own. You may also be allowed to do the assignment with the assistance of another person.

Applying for RPL

RPL stands for **Recognition of Prior Learning**. It is a form of assessment that acknowledges the skills and knowledge you have gained through:

- on-the-job experience
- formal training in other courses
- life experience, through your hobbies or other outside activities.

If you believe that you are already competent in some or all of the skills covered in this unit, ask your assessor about how to apply for RPL.

Using this workbook

All of the lessons in the Learner guide for this unit have learning activities at the end. Their purpose is to provide discussion points and questions to help reinforce your understanding of the concepts being presented.

There are also a range of assignments, which appear at the end of each section. These are designed to test your knowledge of the subject matter and ability to submit written responses in an acceptable format.

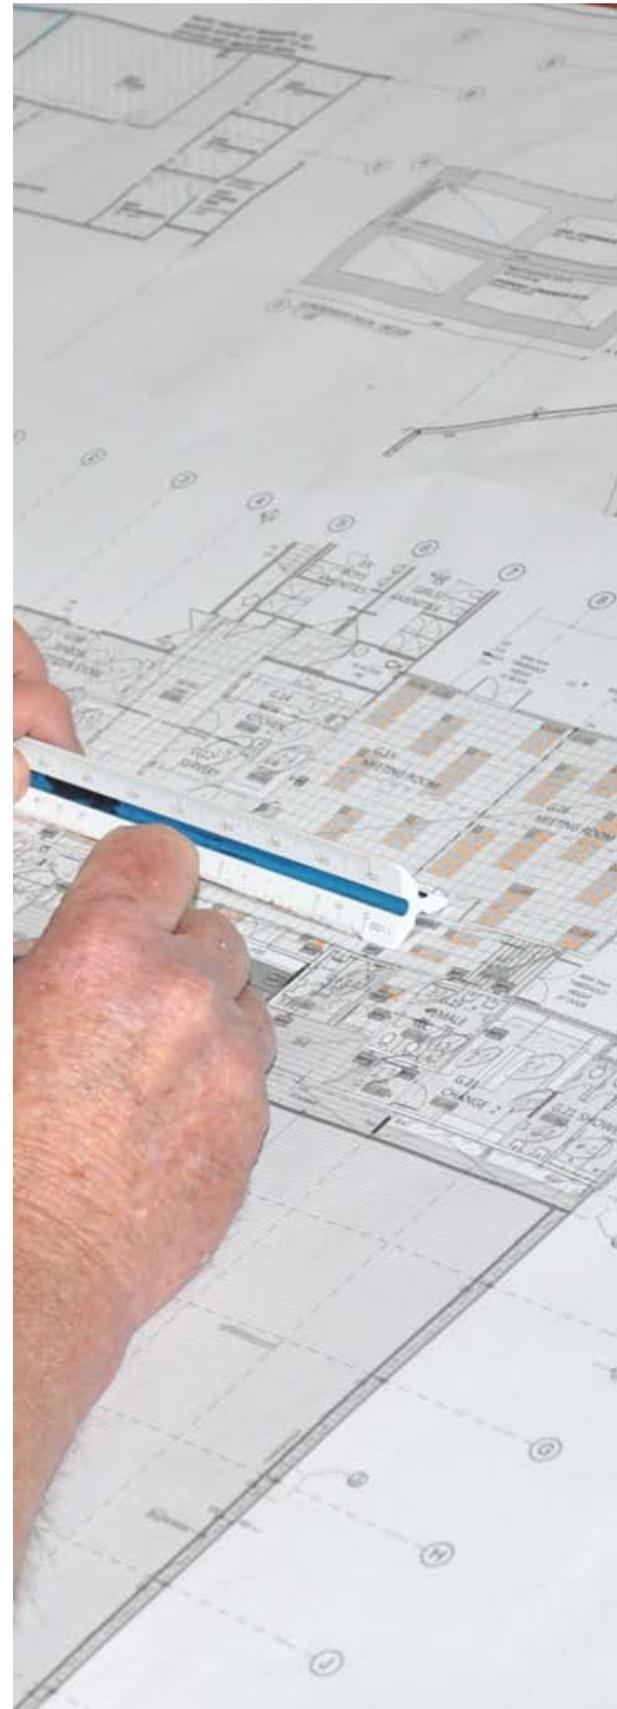

This workbook reproduces all of the learning activities and assignments in a format that lets you handwrite your answers to the questions.

Note that your trainer may ask you to produce a computer-generated document for all of the formal assignments, either printed out in hard copy or submitted electronically. To do this, go to the website version of the unit and look for the *Assignment* link in each section. This will allow you to type your answers into the 'Word' document and then either print it out or email it direct to your trainer as an attachment.

You may also be asked to share your learning activity answers electronically, especially if you are undertaking this unit by distance learning and are linked up with fellow students in other locations. This might be done through group emails or via a social networking site such as Facebook. In these cases, you should use the website resource rather than this workbook.

Part 1

Learning activities

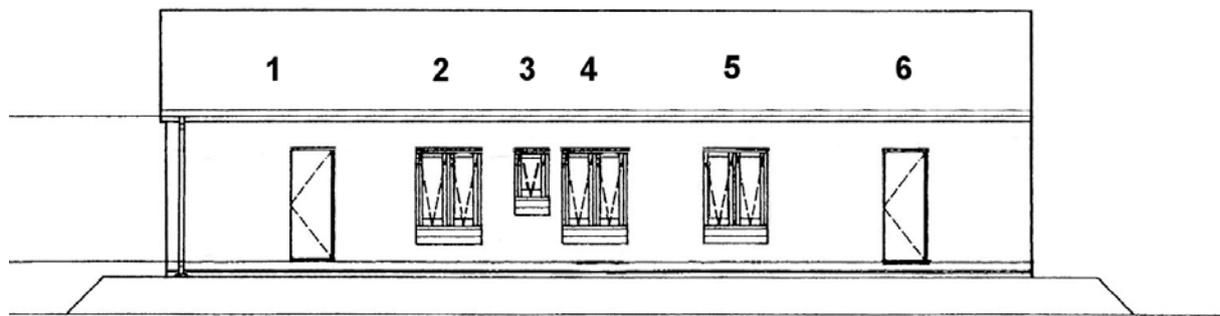

Section 1: Working drawings

Building plans

Below is the South Elevation of the house that we looked at in the plans in the Learner guide. The numbers along the roof indicate the different rooms across the back of the house.

Use the floor plan on page 7 of the Learner guide to identify the rooms that correspond to these numbers. Write your answers in the table below.

SOUTH ELEVATION

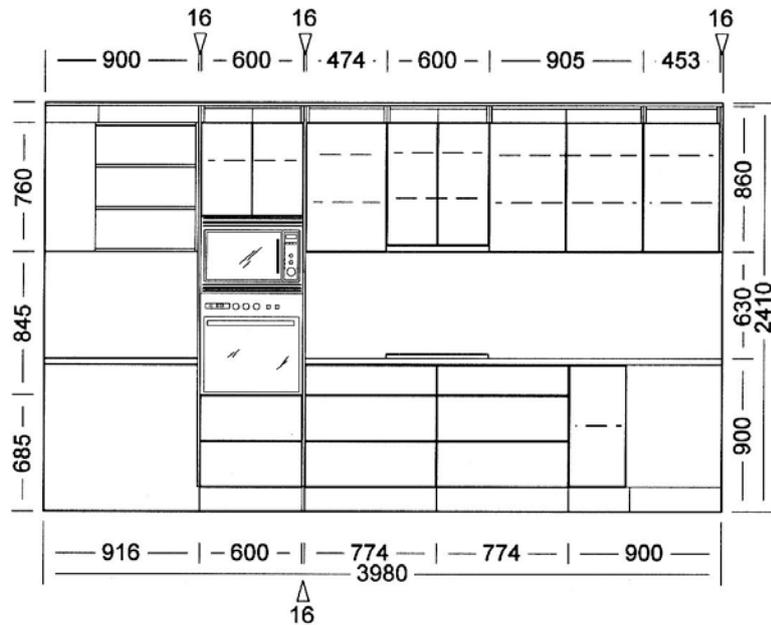

SCALE 1:100

Number	Corresponding room
1	
2	
3	
4	
5	
6	

Architectural conventions

The drawings below show a rear elevation and 3D view of a kitchen project. Use a separate sheet of paper to do a simple sketch of the floor plan, using only these two drawings as a guide. There is no need to mark in the dimensions, but try to draw to scale as accurately as possible.

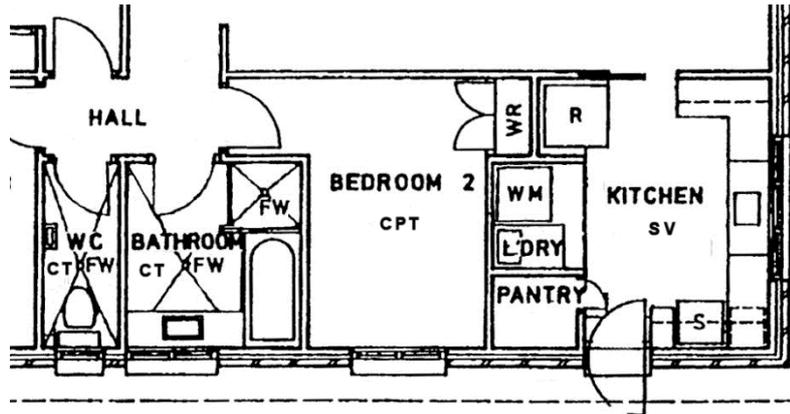

When you have finished, go back to page 7 of the Learner guide to see how your drawing compares with the original floor plan.

Key information on plans

Below is an excerpt from the floor plan we looked at on page 7 in the Learner guide.

Write out the full name for each of the abbreviations listed in the table underneath the plan. Try to do this task without referring to the abbreviation list in the Learner guide. If you get stuck on any of the abbreviations, you may refer to the list once you've finished writing in the answers you know.

Abbreviation	Meaning	Abbreviation	Meaning
FW		R	
S		WC	
WM		WR	
CT		CPT	

Floor covering plans

Draw a simple floor covering plan below in the form of a proportional sketch.

You may either draw Bedroom 3 in the building plan shown on page 7 of the Learner guide, or choose one or more of the other rooms if you want a more challenging exercise. Alternatively, if you have a tape measure to hand, you may draw up the room you are sitting in right now.

Mark all relevant measurements on the inside of the walls. You may draw the lines freehand or use a ruler if you prefer.

Section 2: Other documents

Standards and specifications

Which Australian Standards do you need to refer to in your day-to-day work?

Are there any other standards you use that aren't listed on page 27 of the Learner guide? If so, what are they?

Work procedures

Do you use cutting lists for any products? For example, you might use them to pre-cut inlay pieces or pre-formed coving. On larger jobs, you might use them to cut rolls of material to a range of different lengths.

Describe the situations where you have used them and what the cutting list looked like.

Planning and checking

Have you ever found a discrepancy between two documents, or seen something that looked like a mistake in a plan or specification? What were the circumstances? Who did you check with to resolve the problem?

If you haven't had this experience, describe what you would do if you found a problem in the plans or specifications you were working with.

--

Maintaining files

Are you responsible for looking after particular documents at work? What are they?

Name each document and briefly describe its purpose and where you store it when it's not being used.

Document name	Purpose	Where stored

Part 2

Assignments

Assignment 1

Your trainer will give you a set of plans for a floor covering project. You will be asked to find the answers to a range of questions about the project by referring to the plans.

The questions will cover the following details:

- types of floor coverings to be installed
- dimensions of specific rooms
- widths of doorways and other openings
- which way the doors swing (that is, which side the hinges are on)
- structure of the walls and floor
- various details about the floor covering installation.

Assignment 2

Name		Date	
------	--	------	--

List 10 different types of documents that you use at work. There must be at least one example of each of the following documents:

- Australian Standard
- manufacturer's installation guidelines or technical manual
- material safety data sheet
- work plan, project schedule or equivalent
- building code or project specification
- safe operating procedure or equivalent
- safe work method statement, job safety analysis or equivalent

For each of the documents you have chosen, answer the following questions:

- What is the full title of the document?
- What is its purpose?
- Who is responsible for looking after it and making sure the employees are using the latest version? (Give the job title of the person, not their name.)
- What is the version control system – that is, how do you know you're looking at the latest version?
- Where is it kept at your workplace, and if there are multiple copies, who has copies? (Give the job titles of the people who have their own copies.)
- Who would you consult if you were out on-site and had a query about a detail in the document? (Give the job title or role of the person you would consult.)

Use the tables on the following pages to complete your answers.

Document 1	
Title	
Purpose
